Billing PAs = people who issued invoices for the BU in the last 6 months (Water: Chaimae and Nouaman; AM: Abdelali and Malak). Mining is billed by the Fertilizers PA, JET by the Energy PA. JET unbilled is negative (credit notes) and shown as 0.

Proposed: six seats sized on the BU, PAs grouped under Hajar, billing split evenly

Soufiane Echchih
Senior PA · out of Water
Reconciliations · FBP reporting · intra-department SPOC

Finance Business Partnering
6 seats · 3 dedicated · 3 consolidated

Hajar Aanaya · AR & Reconciliation Champion
All Project Accountants grouped here, 10.1 FTE on billing
Saba Loubiri · Mehdi Baabo Ellah · Karim Nseri · Ikram El Adraoui · Chaimae Lourhaoui · Khadija Moulaoui · Abdelali · Malak Mgouni · Aboubakre Laadidioui · Nouaman Drai · Oumaima El Hazgoune

reporting line · PAs grouped under Hajar, assigned to a seat

Seats and Senior PAs

Fertilizers + Mining (Hind, Jihane), Water (Najia, Imane), SP2M (Soukaina, Khadija) and AM (Yassine Taarabt first layer, Nouaman Drai second) keep a seat each. Amine takes JESA Technologies + B&I, Rabab takes Energy + Advisory with Oumaima as Senior PA. Soufiane Echchih leaves Water for a transversal role: reconciliations, FBP reporting, intra-department SPOC.

One PA pool under Hajar

All Project Accountants are grouped under Hajar Aanaya, AR & Reconciliation Champion, and assigned to a seat (dotted line). The pool can move FTE between BUs as the backlog shifts; Khadija and Oumaima keep part of their time as Senior PA and are the first reserve.

Billing split evenly

Each seat gets FTE in proportion to its projected load (6-month run-rate + unbilled backlog over 12 months). Result per FTE per month: Fertilizers + Mining 61, Water 69, SP2M 76, AM 67, Energy + Advisory 69, JET + B&I 62, group 66. Only addition: Karim Nseri, half on Fertilizers, half on Water.

Billing by BU: actuals, projected need, old gap and new gap

Need FTE = (6-month run-rate + unbilled backlog ÷ average invoice ÷ 12 months) ÷ 60 invoices per PA per month. Invoices = distinct invoice numbers by invoice date. JET unbilled is negative (credit notes), shown as 0. Red gap = shortfall above 0.3 FTE, green = slack above 0.3 FTE.

OLD GAP · EACH BU BILLS ALONE

Old gap = Need FTE − PAs today

= 11.1 − 9.0 = +2.1 FTE

Shortfall (positive gaps): 4.5 FTE, in Fertilizers, AM, Mining, JET.

Slack (negative gaps): 2.4 FTE, in SP2M, Water, Energy, B&I, Advisory.

Not transferable today: no one owns billing across BUs, so the slack does not reach the shortfall.

NEW GAP · PROPOSED SPLIT

New gap = Need FTE − PAs proposed (FTE)

= 11.1 − 10.1 = +1.0 FTE

Shortfall falls from 4.5 to 1.1 FTE: Fertilizers +0.1, SP2M +0.1, Water +0.2, AM +0.5, Advisory +0.1, JET +0.1.

Slack 0.2 FTE: Mining, B&I.

FTE split evenly on load, about 66 invoices per FTE per month; Soufiane out of billing; JET billed with B&I, Advisory with Energy.

HOW THE GROUP TEAM CLOSES IT

Pool slack + Senior PA reserve vs net gap

= 0.2 + 0.9 − 1.1 = -0.1 FTE

All PAs sit in one pool under Hajar Aanaya, so slack in one BU is moved to another instead of staying idle. Khadija (0.5) and Oumaima (0.4) keep Senior PA time that becomes billing capacity in peak months.

At 60 invoices per FTE the net is +1.0 FTE; at the 66 the even split actually delivers, the pool covers the full load with the reserve untouched.

Scenario: if every BU billed at the AM rate of the last two months

	ACTUALS		NEED AT TWO PRODUCTIVITY LEVELS			TODAY, AT AM RATE		PROPOSED, AT AM RATE

THE AM REFERENCE

250 invoices a month

Sep–Oct 2026, issued by 2 billing PAs under one Head of Finance and one Senior PA

125 invoices per PA per month

against 60 used as capacity on slide 3, and under 20 for every other BU today

Mirror it everywhere:

Need falls to 5.3 FTE for the whole group against 9 PAs today: 3.7 FTE freed.

Today's 9 PAs at the AM rate issue 1,125 a month: 807 above the run-rate, so the 4,140-invoice backlog clears in about 6 months instead of 12.

WHAT THE AM MODEL IS

One head (Mohamed Ouarda), one Senior PA (Yassine Taarabt), a pooled PA team with no split by project, and repetitive labor invoices with a small average ticket (0.80 MMAD). Volume per person is six to ten times the other BUs.

WHY IT DOES NOT TRANSFER ONE FOR ONE

SP2M and JET bill tickets of 6 MMAD with client PO and milestone steps; Fertilizers and Water carry 2,100 MMAD each of aged unbilled that needs project-by-project reconciliation before invoicing. The AM rate is an upper bound, not a target for every BU.

WHAT TO TAKE FROM IT

The structure, not the number: one Senior PA per cluster, PAs working as a pool, standard invoice packs per client. Halfway to the AM rate (about 90 invoices per PA) the proposed 10.1 FTE carries the full load with about 3 FTE to spare for backlog and reconciliation.
