Current organisation: eight FBP seats, an SPA on only two of them

Average per PA = the BU's Jan–Oct 2026 monthly invoice volume divided by the number of PAs assigned to it. Group total 418 invoices a month.

Six seats with no support

AM, Energy, JET, B&I, Advisory and SP2M each run on one FBP with no SPA. Only Fertilizers and Water have the FBP + SPA pair.

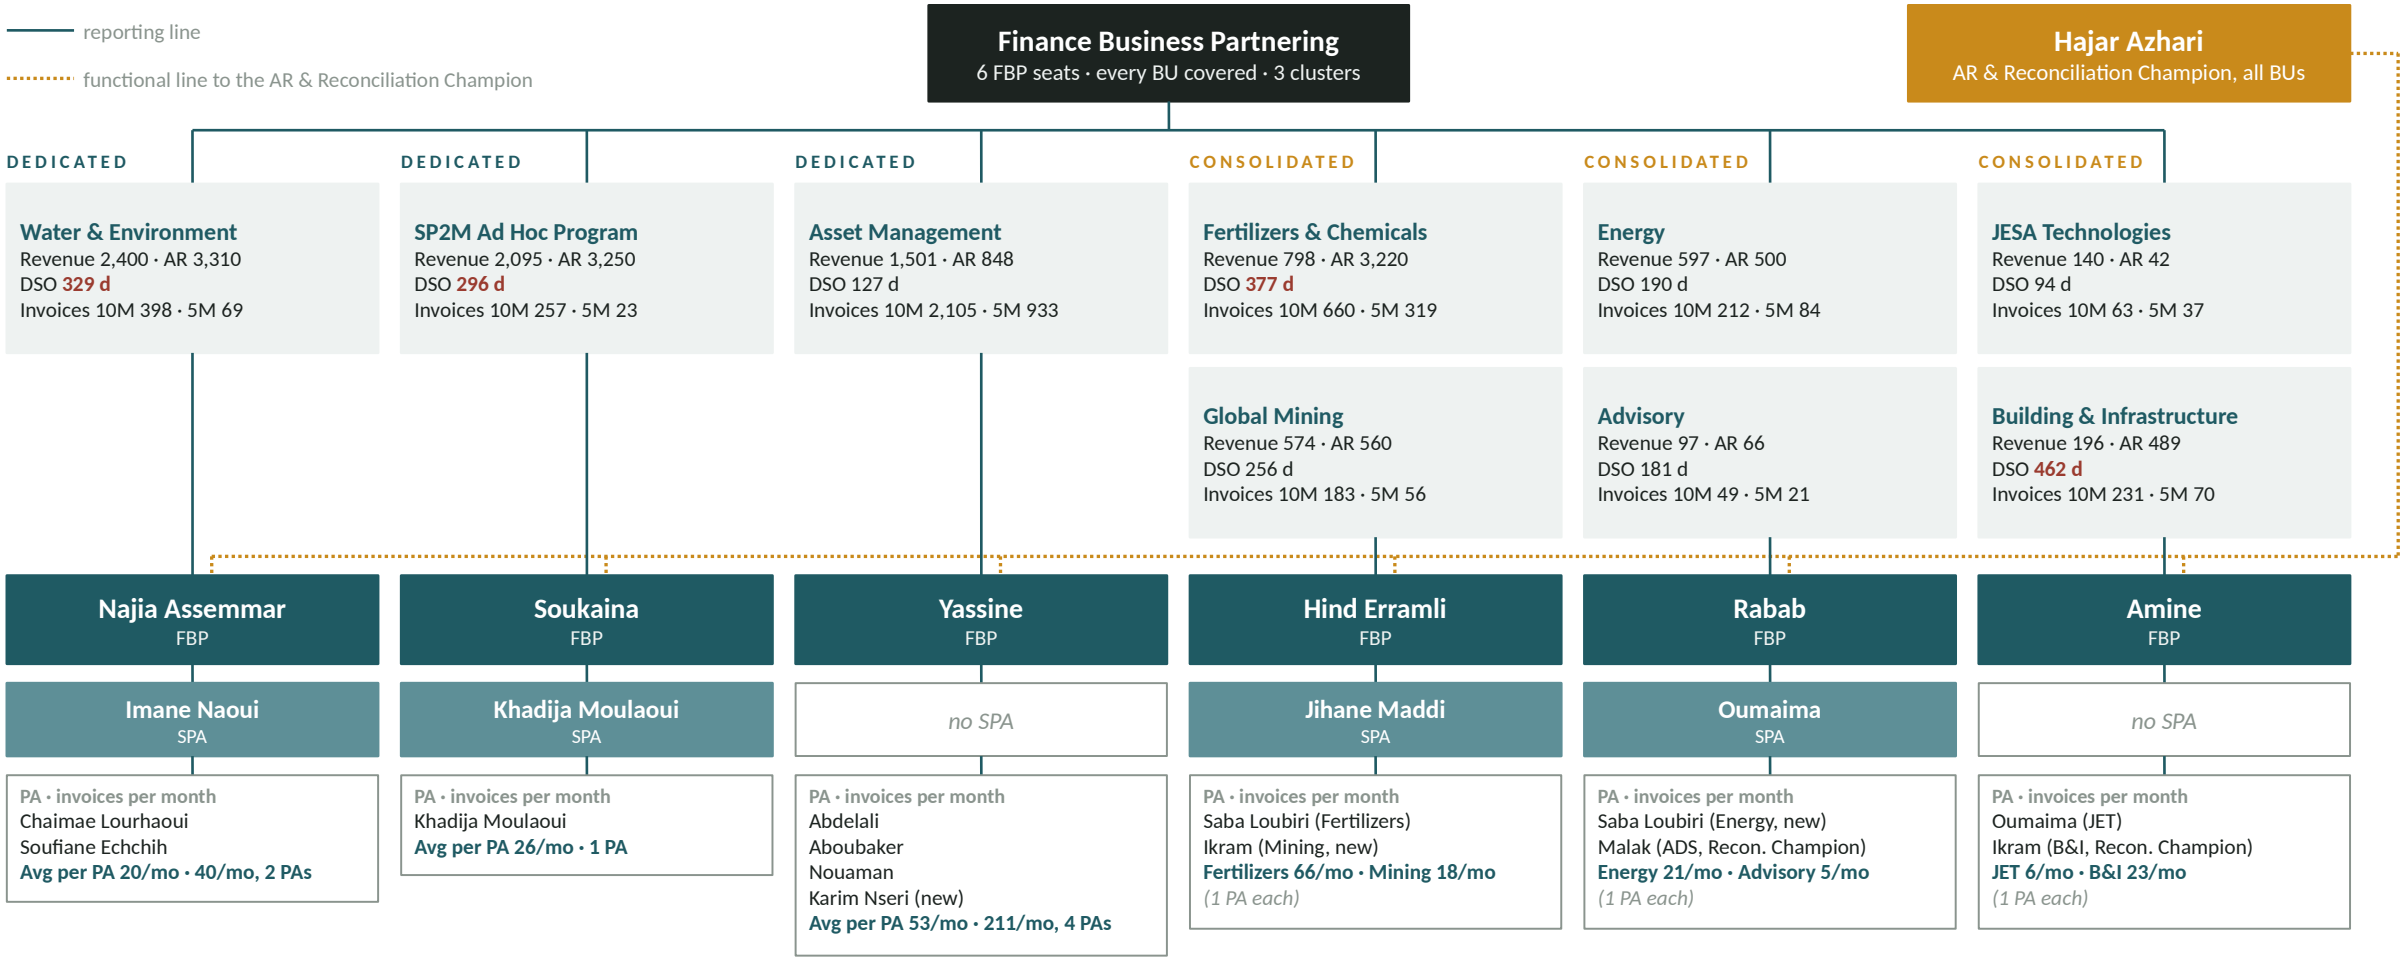

Invoicing borrowed across BUs

Mining, Energy and SP2M have no PA of their own. Saba Loubiri, Oumaima and Khadija Moulaoui invoice for them on top of their own BU.

AR control limited to one BU

Only AM has an AR Champion (Hajar Azhari). Water, SP2M and Fertilizers, 9.8 bn MAD of AR between them, have none, and B&I and Fertilizers sit at 462 and 377 days DSO.

Option A: dedicated FBP and SPA for the big BUs, the small BUs consolidated

Average per PA = the BU's Jan–Oct 2026 monthly invoice volume divided by the PAs assigned to it in the proposal. Every BU now has its own PA. Oumaima moves from PA to SPA on Energy + Advisory; Khadija Moulaoui keeps SP2M only.

Size the support to the exposure

Water, SP2M, AM and Fertilizers carry 85% of group AR (10.6 bn MAD). Each keeps a dedicated FBP, and an SPA where one is named.

Consolidate the small BUs

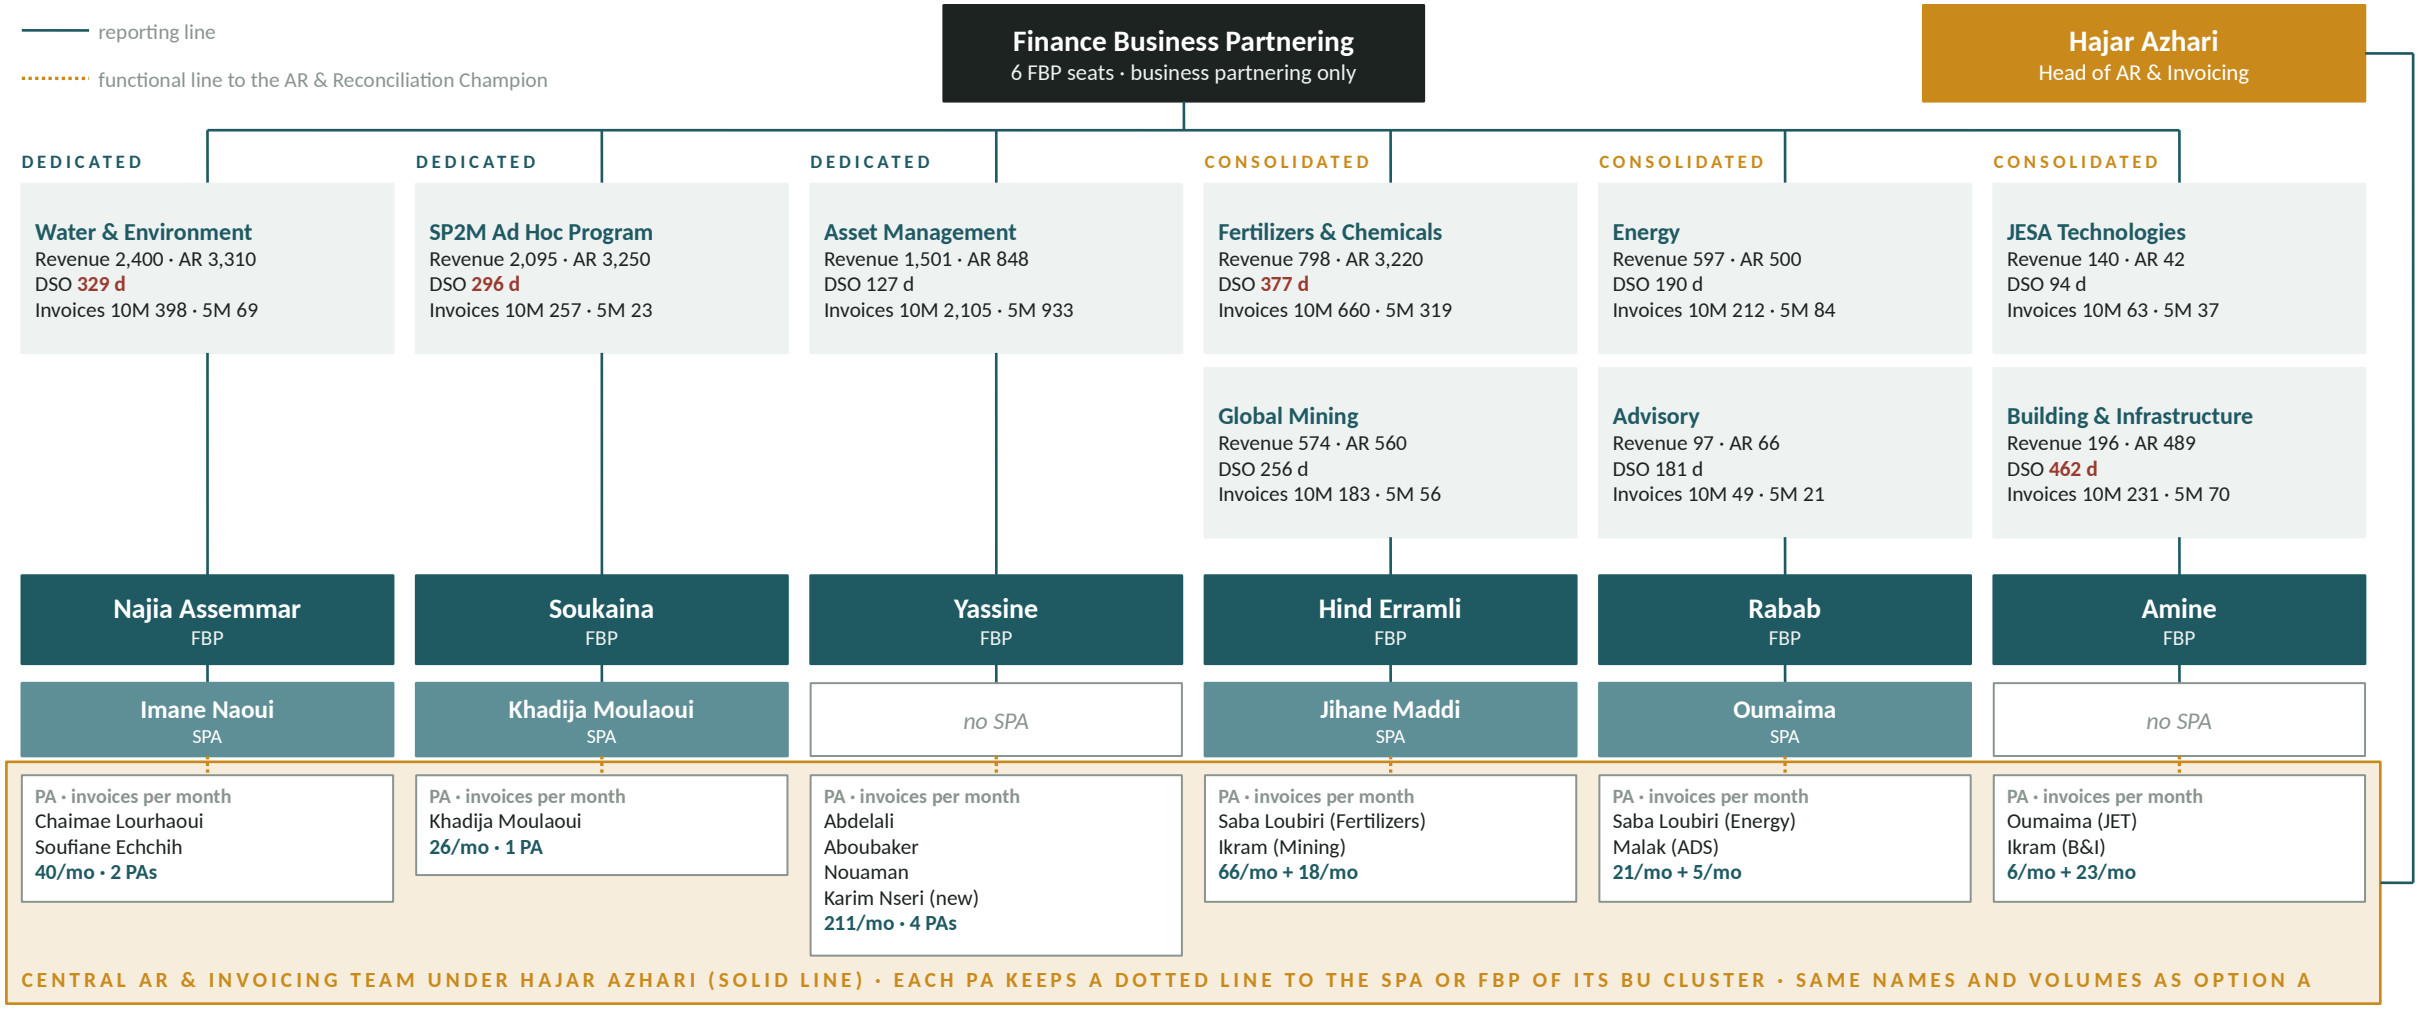

Mining, Energy, JET, B&I and Advisory together are 1,604 MMAD of revenue and 1,657 MMAD of AR. Three clusters under one FBP and one SPA each replace five seats; Advisory moves from Hajar Aanaya to Rabab.

One line of control on receivables

The AR & Reconciliation Champion has a functional line to every FBP. Every BU has a dedicated PA, so the person invoicing is not the person reconciling.

JESA Group · Finance Business Partner team · KPIs: FY27 RFQ1 revenue and AR balance Oct-26 in MMAD, DSO excl. advances in days, invoices issued Jan–Oct 2026 · red DSO = above the 282-day group average

Option B: FBPs stay by BU, invoicing and AR centralised under Hajar Azhari

What changes

All PAs move under one Head of AR & Invoicing. They keep a BU alignment (dotted line to the SPA or FBP) but the pool, the priorities and the dunning calendar are run centrally. Reconciliation champions become one team.

Why it can work better

One owner for the 282-day group DSO and the 12.3 bn MAD balance instead of six. Standard invoicing and collection process across nine BUs. Volume peaks (AM at 211/mo) absorbed by the pool rather than by one person.

Watch out

FBPs lose direct authority over invoicing speed on their BU; the dotted line and a shared DSO target must be explicit. Needs a real lead role for Hajar Azhari and a transition where PAs keep their BU knowledge.

Reading it. The 5-month run-rate is 22% below the 10-month one at group level, but not evenly: Water, SP2M, Mining and B&I issued far fewer invoices from June; AM, Fertilizers and JET held up. Averages per PA use the BU volume divided by the number of PAs assigned to it. "13 seats" counts Saba Loubiri and Ikram twice, once per BU; 11 distinct people. **Last 3 months:** not available in the file received; the workbook holds Jan–Oct and Jun–Oct counts only. Share the AR weekly invoice register and I will add Aug–Oct.

Invoices actually issued, by person	10M	/mo	5M	/mo
Abdelali	1,547	155	693	139
Saba Loubiri	843	84	375	75
Malak	623	62	263	53

How it is computed

Average invoice = FY27 revenue ÷ annualised 2026 invoice count. Invoices in the AR balance = AR ÷ average invoice. AR conversion = those invoices × unbilled share ÷ 12 months. Future load = 10M run-rate + AR conversion. PAs needed = future load ÷ capacity.

Assumptions to challenge

Unbilled share of the AR balance: 50% (the dashboard gives unbilled and unpaid together). Capacity: 60 invoices per PA per month, between today's AM average (70) and Water (20). Conversion spread evenly over 12 months. Split by business line inside a BU is not possible from the file.

What it says

Fertilizers is the outlier: AR at four times revenue with small tickets means roughly 3,200 invoices sit in the balance, three PAs of work at the chosen capacity against one proposed. AM is close to its four PAs. Everywhere else one PA per BU has headroom, which supports pooling in Option B.
