* forecast below the 4-month run-rate (Jul–Oct, the reference window after departures), so the run-rate is used. PTD = project-to-date: all billed invoices in the register for the BU (Fertilizers since 2011, SP2M since 2022), amount HT ÷ distinct invoice numbers. Proposed FTE column excludes Karim Nseri (1.0 support under Hajar); the group row adds him.

HOW THE FORECAST IS BUILT

Avg invoice (PTD) = Σ amount HT ÷ distinct invoices, all years

Forecast inv./mo = FY27 revenue ÷ avg invoice value ÷ 12, floored at the 4-month run-rate

Backlog inv. = unbilled ÷ avg invoice value; converted over 12 months

Future load = forecast + backlog/mo · Need = load ÷ 60 per FTE

OLD GAP · EACH BU BILLS ALONE

Old gap = Need − PAs today = 10.4 − 9.0 = +1.4 FTE

Shortfall 3.2 FTE in Fertilizers, Water, AM, Mining, JET.

Slack 1.7 FTE in SP2M, Energy, B&I, Advisory, not transferable: no one owns billing across BUs.

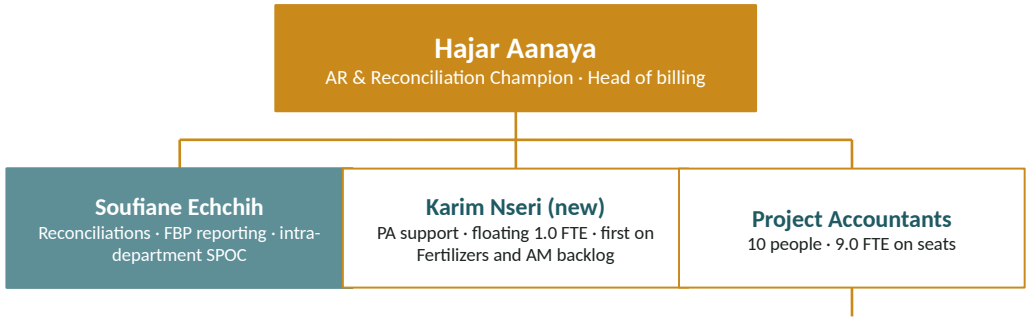

NEW GAP · POOLED UNDER HAJAR

New gap = Need − seat FTE − support = 10.4 − 9.0 − 1.0 = +0.4 FTE

Shortfall on seats 1.5 FTE (Fertilizers +0.3, SP2M +0.1, Water +0.3, AM +0.2, Mining +0.3, Energy +0.1, Advisory +0.1, JET +0.1), covered by Karim Nseri as floating support and 0.5 FTE of Senior PA reserve (Khadija, Oumaima).

One pool: slack moves between BUs as the backlog shifts instead of staying idle.

Billing organisation under Hajar Aanaya, and the scope of each Project Accountant

FERTILIZERS + MINING · HIND / JIHANE
Saba Loubiri 1.0
Mehdi Baabo Ellah 1.0
Ikram El Adraoui 0.4

ASSET MANAGEMENT · YASSINE / NOUAMAN
Kamal El Idrissi Abdelali 1.0
Malak Mgouni 1.0
Aboubakre Laadidioui 1.0

Malak Mgouni	Asset Management	**1.0**	225	**64**	**87**
Aboubakre Laadidioui	Asset Management	**1.0**	225	**64**	**87**
Nouaman Drai	AM 0.5 · second layer AM and JET + B&I	**0.5**	225	**64**	**87**
Karim Nseri (new)	PA support, floating	**1.0**	–	**–**	**–**
Total	9 BUs	**10.0**	**626**	**63**	**163**

Scope load = future load of the BUs in scope (slide 3). Inv. per FTE = scope load ÷ FTE of all PAs on that scope, so people sharing a BU show the same figure. MMAD per FTE = the same load weighted by each BU's PTD average invoice value, so SP2M and Water carry fewer but larger invoices. Group: 63 invoices and 163 MMAD per FTE including Karim Nseri's support.

Solid line: all PAs, Karim Nseri and Soufiane Echchih report to Hajar Aanaya. Each PA is assigned to a seat (dotted line on slide 2) and works to that seat's FBP and Senior PA day to day.

Scenario: if every BU billed at the AM rate of the last two months

	ACTUALS		NEED AT TWO PRODUCTIVITY LEVELS			TODAY, AT AM RATE		PROPOSED, AT AM RATE

THE AM REFERENCE

250 invoices a month

Sep–Oct 2026, issued by 2 PAs (Abdelali, Malak) under one Head of Finance and one Senior PA; Nouaman Drai has since joined AM full time

125 invoices per PA per month

against 60 used as capacity on slide 3, and under 20 for every other BU today

Mirror it everywhere:

Need falls to 5.0 FTE for the whole group against 9 PAs today: 4.0 FTE freed.

Today's 9 PAs at the AM rate issue 1,125 a month: 719 above the forecast billing, so the 2,638-invoice backlog clears in about 4 months instead of 12.

WHAT THE AM MODEL IS

One head (Mohamed Ouarda), one Senior PA (Yassine Taarabt), a pooled PA team with no split by project, and repetitive labor invoices with a small recent ticket (0.80 MMAD over the last 6 months, 1.35 PTD). Volume per person is six to ten times the other BUs.

WHY IT DOES NOT TRANSFER ONE FOR ONE

SP2M bills tickets of 8 MMAD PTD with client PO and milestone steps; Fertilizers and Water carry 2,100 MMAD each of aged unbilled that needs project-by-project reconciliation before invoicing. The AM rate is an upper bound, not a target for every BU.

WHAT TO TAKE FROM IT

The structure, not the number: one Senior PA per seat, PAs working as a pool under one head, standard invoice packs per client. Halfway to the AM rate (about 90 invoices per PA) the proposed 10.0 FTE carries the full load with about 3 FTE to spare for backlog and reconciliation.
